

Title: What is dyscalculia?

(0:07) research suggests dyscalculia could be
(0:09) impacting up to six percent of us
(0:12) it impacts a person's ability to learn
(0:14) number related concepts
(0:16) and to understand recall or use
(0:18) numerical information
(0:20) but it can also give people exceptional
(0:23) abilities to think differently
(0:27) dyscalculic people can struggle with
(0:30) counting and basic mental maths
(0:32) telling the time and time management
(0:35) finances and budgeting
(0:37) visual and spatial orientation including
(0:40) estimating distances
(0:42) and navigation and direction
(0:47) dyscalculic people are often exceptional
(0:49) at reading writing and spelling
(0:52) thinking strategically and seeing
(0:54) situations holistically
(0:56) being creative artistic and imaginative
(1:00) solving problems and thinking outside
(1:02) the box
(1:03) and also being practical
(1:09) to support dyscalculic people you could

(1:11) provide calculators
(1:13) or support with setting reminders timers
(1:16) and alerts to help with time management
(1:19) or have a quiet area or screening around
(1:21) their desk or supply headphones to
(1:23) support with
(1:24) concentration but most importantly it's
(1:27) best to ask individuals how their
(1:29) dyscalculia impacts them because
(1:31) everyone is different
(1:33) this way you can tailor the support to
(1:35) suit them
(1:41) you
