

Title: What is dyslexia?

(0:03) [Music]

(0:07) did you know that dyslexia is more than

(0:09) just an issue with spelling

(0:11) dyslexia affects how the brain handles

(0:14) information it sees and hears

(0:16) this can give people exceptional

(0:18) abilities to think differently but also

(0:21) causes some problems with day-to-day

(0:23) tasks

(0:26) dyslexic people are often exceptional at

(0:29) telling stories

(0:30) solving problems

(0:32) seeing patterns

(0:34) inventing and seeing the bigger picture

(0:40) dyslexic people can find it hard to read

(0:42) spell and use language

(0:44) retain information and instructions

(0:47) fill in forms

(0:49) read maps and tell their left from their

(0:51) right

(0:56) to support dyslexic people to perform at

(0:58) their best you can try to use different

(1:01) formats to convey information such as

(1:03) diagrams and verbal instructions as well

(1:06) as written

(1:07) consider using assistive technology such

(1:10) as screen readers and mind mapping

(1:12) software

(1:13) ensure the fonts and colors that are

(1:15) used in communication are accessible for

(1:17) dyslexic people

(1:19) but most importantly it's best to ask

(1:21) individuals how their dyslexia impacts

(1:24) them because everyone is different

(1:26) this way you can tailor the support to

(1:28) suit them

(1:30) [Music]
